Details of Screen Reading Software

NVDA (NonVisual Desktop Access) has been installed in the computers in the Library and the Computer Lab for the easy access. NVDA is a "screen reader" which enables blind and vision impaired people to use computers. It reads the text on the screen in a computerized voice.

Details of the NVDA Software:

NonVisual Desktop Access (NVDA) is a free and open source, portable screen reader for Microsoft windows. NVDA uses eSpeak as its integrated speech synthesizer. It also supports the Microsoft Speech platform synthesiser,
