Add On Course- Artificial Intelligence with Python

Course Outline and Syllabus

Course Code: AI 16

Name of the course: Artificial Intelligence with Python

Field: Computer Science

Duration: 6 Weeks

INTRODUCTION

The amount of data produced by both humans and machines today far outstrips the ability of humans to consume, analyse, and make complex decisions based on that data. Artificial intelligence forms the foundation of all machine learning and reflects the future of all contextual decision making.

During the course of 6 weeks, students will get to know the basic philosophy behind artificial intelligence. The course will cover basic ideas and techniques underlying the design of intelligent computer systems.

Topics include: Introduction to AI and intelligent agents. Solving Problems by Searching, heuristic search techniques, constraint satisfaction problems, stochastic search methods. The learning algorithms for solving the real world problem. In the assignment students will design a small project solving real life problem using python language.

ADMISSION PROCESS

The students of BCA/BSC who have the basic knowledge of algorithm development and coding skills will be selected.
